Voice Based Summarised Digital HPC

Middle Stage - Grades 6, 7 and 8
Step-by-step user guide

VOICE • AI • EVIDENCE • REVIEW • HPC

Created by Mateen Yousuf
Teacher, School Education Department
UT Resource Person, Artificial Intelligence and Educational Technology

This guide explains what the app does, how to install it, and how to complete a student's Holistic Progress Card (HPC) with it. It is an independent teacher tool and is not an official government application. The official HPC and its How-to-fill guide remain the source of truth.

1. What the app does

The app lets a teacher record observations by talking or typing, keeps them as evidence, and organises them under the official Middle Stage HPC structure. The teacher always makes the final decision.

- **Part A(1)-A(4):** general information and attendance, interests, All About Me, My Ambition Card, Parent-Teacher Partnership Card.
- **Part B:** activity records for all nine learning standards, with the official curricular goals and competencies, activity approaches, rubric, student self-reflection, peer feedback and the Student Progress Wheel.
- **Part C:** year-end summary for each of the nine standards plus Overall.
- **Credits:** the official Grade 6, 7 and 8 credit tables and note.
- **Evidence Bank:** every saved activity, kept as a timeline.
- **Coverage tab:** shows what is implemented and what is still missing.

The nine learning standards

Language Education (R1), (R2), (R3), Mathematics, Science, Social Science, Art, Physical Education and Well-being, Skill Education. R1, R2 and R3 are kept separate.

2. Installing the app (laptop)

A banner at the top of the screen always shows **Install as PWA**. Installation needs the app files served from a secure address.

1. Unzip **digital-hpc-pwa.zip** to a folder.
2. Host the folder on an HTTPS site (Netlify Drop, GitHub Pages or Cloudflare Pages), or open a terminal in the folder and run `python3 -m http.server`, then open `http://localhost:8000`.
3. Open the address in Google Chrome or Microsoft Edge.
4. Click **Install as PWA** in the top bar. If the browser does not show its prompt, use the install icon at the right end of the address bar, or the three-dot menu, then Install.
5. Launch it from the desktop or Start menu icon. It opens full screen and works offline after the first load.

Double-clicking index.html will not allow installation. Browsers only allow offline apps from HTTPS or localhost.

3. Getting started in five minutes

1. Open the **Students** tab. Add a student with name, grade (6, 7 or 8), section and roll number. Use **Load demo students** to practise first.
2. Press **Open** on a student. That student is now selected across all tabs.
3. Use **Part A** to record attendance, interests and the student, ambition and parent cards.
4. After each classroom activity, use **Talk** and **Activity** to record evidence.
5. At year end, complete **Part C** and check **Credits** and **Coverage**.

4. Tab-by-tab guide

Talk (voice and typing)

1. Choose the speech language: English (India), Hindi or Urdu.
2. Tap the large microphone and speak, for example: *During the science experiment, Ali recorded his observations and helped his group.* Or type in the box and press **Understand this**.
3. Read **What I heard**. Correct any mistakes in the text box.
4. Read **What I understood**. The app lists possible evidence words under Awareness, Sensitivity and Creativity. It marks an ability with no evidence so you can add detail.
5. Press **Accept into evidence notes**. The text moves to the Evidence field of the Activity tab. Press **Speak again** to redo.

- Speech recognition works in Chrome and Edge and needs an internet connection. If it is unavailable, type instead.
- This step only suggests evidence. It never assigns a performance level.

Students

Add, open or delete students. Deleting a student also deletes their evidence.

Activity (Part B)

1. Choose the **Subject** (learning standard). The goals and competencies shown change to match.
2. Open a curricular goal, press **Select goal**, and tap the competency codes that apply. You can choose more than one.
3. Write the learning outcome, tick the **approaches** (Art-integrated, Sports-integrated, Toy-based, Technology-integrated, Skill-based, Experiential, Cross cutting theme, Indian Knowledge Systems, Any Other), and enter the activity title, activity, assessment and evidence. Add CWSN or inclusion notes if relevant.
4. **Assessment Rubric:** tap Beginner, Proficient or Advanced for each ability. Use the subject's own names, such as Literary, Mathematical, Scientific, Social or Aesthetic Awareness, Sensitivity and Creativity.
5. **Student's Self Reflection:** record the three face questions, tap the statements the student circled in My Progress Grid, and fill My Learnings.
6. **Peer Feedback:** record the peer's name, two questions and the peer's progress grid statements. Treat this as private.
7. **Teacher's Feedback:** view the wheel, tick Areas of Strength and Barriers, then write how you can help and your observations and recommendations.
8. Press **Save to Evidence Bank**.

Scoring the progress grids

Statements circled (of 6)	Level
0, 1 or 2	Beginner
3 or 4	Proficient
5 or 6	Advanced

The app counts the statements for Awareness, Sensitivity and Creativity separately and labels the result *calculated*. Student, peer and teacher results stay separate and are drawn side by side on the wheel. Rings grow outward: Beginner, Proficient, Advanced. A blank segment means not recorded.

Evidence

A timeline of saved activities for the selected student: date, subject, title, the three teacher levels, and the self and peer counts. A level never entered shows as NOT ASSESSED.

Part A

Attendance: type school days and days present per month. The percentage and totals are calculated; never enter a percentage yourself, and leave blanks if the data is not available. Also here: Interests (multiple choice), All About Me with the goals, learnings and For My Teacher, My Ambition Card, and the Parent-Teacher Partnership Card including the four parent questions, home resources, support needs and the home-support statement. Record the child's and parent's own words.

Part C

For each of the nine standards, tick one level for Awareness, Sensitivity and Creativity and write the observational note for the whole year. Levels recorded in Part B activities appear beside each ability as a reference (B, P, A). You decide the final level. An Overall block is at the end.

Credits

Shows the official table for the selected student's grade: NCrF level (Grade 6: 1.33, Grade 7: 1.67, Grade 8: 2.0), the credit points for each standard, and the official note. The column for credit points earned by the learner is left for teacher or school confirmation.

Coverage and Privacy

Coverage lists what is built and what is missing. Privacy lets you export all data as a JSON backup or delete all local data.

5. Good practice

- Record evidence soon after the activity, while you remember it.
- Rate each level from that student's performance in that activity, not from marks, attendance or general impressions.
- Select barriers such as Domestic Issues or Severe illness or injury only when you have confirmed them yourself.
- Use neutral, observable wording: what the student did, a strength, a challenge, the support given and the next step.
- Export a backup regularly.

6. Privacy and data

All data stays in the browser on that laptop. Nothing is uploaded. Clearing browser data erases the records, so export backups. Different browsers or devices do not share data. No AI service is connected in this version.

7. Current limits

- Performance-level descriptor text and the exemplar activities from the official guide are not yet loaded.
- Real AI transcription, extraction and summary writing, document scanning (OCR) and photo analysis need a secure backend and are not connected.
- PDF export of the finished card, import/restore, and class bulk mode are not built.
- Part A(1) school header details, APAAR, UDID and photograph are not captured in the app.
- The curricular goal and competency list was extracted automatically from the official guide. A few entries (for example SCCG7 and VCG4) should be checked against the PDF.

8. Troubleshooting

Problem	What to try
No Install option	Open from https or localhost in Chrome or Edge, not from a file.
Microphone does not work	Allow microphone permission for the site; use Chrome or Edge; check internet; otherwise type.
Data missing	You may be in a different browser or have cleared browser data. Restore from a backup.
Page looks old after an update	Refresh with Ctrl+Shift+R, or close and reopen the installed app.
